Special Issue: "Future Money 2026"

Baltic Journal of Legal and Social Sciences

Baltic International Academy (Latvia)

</div>

The editorial board of the international peer-reviewed scientific journal **Baltic Journal of Legal and Social Sciences (BJLSS)** invites scholars, researchers, policy experts and practitioners to submit original manuscripts for the forthcoming **special thematic issue "Future Money 2026."**

The contemporary financial system is undergoing profound transformation driven by technological innovation, digitalization, and the emergence of new economic paradigms. The Fourth and Fifth Industrial Revolutions are fundamentally reshaping financial institutions, monetary systems, and economic governance. The rapid development of financial technologies, artificial intelligence, digital assets, and new regulatory frameworks is redefining the nature of money, financial intermediation, and economic interaction.

At the same time, global challenges, including geopolitical shifts, economic instability, cybersecurity risks, environmental sustainability concerns, and the expansion of digital ecosystems—require comprehensive interdisciplinary research and critical academic analysis. Understanding these processes is essential for developing sustainable financial systems, effective regulatory policies, and innovative financial instruments suited to the evolving global economy.

The **special issue "Future Money – 2026"** aims to provide a scholarly platform for interdisciplinary dialogue on the transformation of financial systems and monetary institutions. Contributions that combine theoretical perspectives with empirical research and policy analysis are particularly welcome.

Topics of Interest

Submissions may address, but are not limited to, the following areas:

- Financial regulation, compliance, and anti-money laundering (AML) frameworks
- Legal aspects of modern financial systems
- Banking transformation and classical financial instruments
- Asset management, wealth management, and investment strategies
- Risk management in modern financial institutions
- Financial technologies (FinTech), digital platforms, and AI in finance
- Central Bank Digital Currencies (CBDC) and crypto-assets
- Cybersecurity challenges in financial markets
- Customer experience, digital service models, and the experience economy
- Macroeconomic and microeconomic transformations in the digital era
- Taxation, financial reporting, and transparency in financial systems
- Social economy, financial inclusion, and sustainable development
- Critical thinking and analytical approaches in financial and economic studies
- ESG Principles and sustainable finance
- Corporate governance and institutional accountability in financial organizations
